

### Straightforward minimal aesthetic

Evo is a complete seating solution for individual and group environments. Evo task chairs, task stool and conference chairs are adaptable and interchangeable for use in a multitude of spaces. With a straightforward minimal aesthetic, Evo has been designed with the same underlying principles and rigor as architectural spaces.

### Adjustment free comfort

The newly designed adjustment free seat and weight-activated chair mechanism allows Evo to seamlessly address an individual's need for enhanced comfort and control. Specially sculpted and formulated foam creates a seat that is proven through scientific pressure mapping and testing to reduce pressure points. Easy-to-reach fingertip controls allow access to standard ergonomic adjustments.

### Fits any place or person

Workplace chairs are rarely used all day long by a single individual and little time is spent adjusting the chair. People are just as likely to spend a few hours in a meeting room or at a shared bench as they are at their desk getting work done. Evo has been purposefully designed to provide immediate comfort and to look equally good at the workstation as in the conference room

## Golden Ratio

## Inspired Design

Often discussed by mathematicians, artists and architects alike, the **Golden Ratio** is appreciated for its sense of proportions and visual harmony. This geometric ratio has been identified in art, nature and architecture alike.

## Back

- 1 Soft Touch, High Strength Mesh**  
Mesh on Evo showcases a combination of multifilament and monofilament yarns that allow for a soft, fabric-like hand while maintaining high strength and breathability with full support.

- 2 Micro Section Contoured Frame**  
Evo's ergonomically shaped back frame provides passive lumbar support and promotes upright, engaged tasking behaviors. The color coordinated mesh wraps the front and side of the thin sectioned frame for a clean and minimal edge detail.

- 3 Optional Adjustable Lumbar**  
A user adjustable lumbar support with a 4" range of movement can be specified with task and stool chairs and is in field retrofitable.

## Seat

- 4 Comfort (best in class)**  
The Evo task and conference seat has been purposefully engineered with comfort in mind. Pressure mapping of Evo vs other competitive chairs demonstrates Evo is best in its class.

## 5 Accent Stitch

A selection of ten different contrasting thread colors are offered to make a truly bespoke chair.

## 6 Arms

### Support for Dynamic Postures

Open-arm design allows for side sitting and enables comfortable multi-directional interactions.

### Extended Options

Armless, fixed polished aluminum, height and 4D adjustable arms provide diverse solutions in response to individual user needs.

### Ergo-centric Motion

Armrests remain parallel to worktop to provide ergonomic comfort when in reclined postures.

## 7 Mechanism

### Integrated Weight-Activated Control in Seat

No more micro tuning of tension; auto-adjusting tension fits each user. Evo uses a weight-activated control mechanism that automatically responds to the weight of each user eliminating the need to think about tension adjustment.

## 8 Minimal Adjustments

### Fingertip Adjustments

Simple, intuitive and accessible user interaction. No more paddles or knobs below the seat.

### Molded Iconography

Know what is being adjusted before adjusting. Clear graphic indications are molded into the top surface of the control levels for setting standard ergonomic adjustment; seat height, seat depth and upright tilt lock.
