a project by EX. (Andrea Cassi and Michele Versaci)

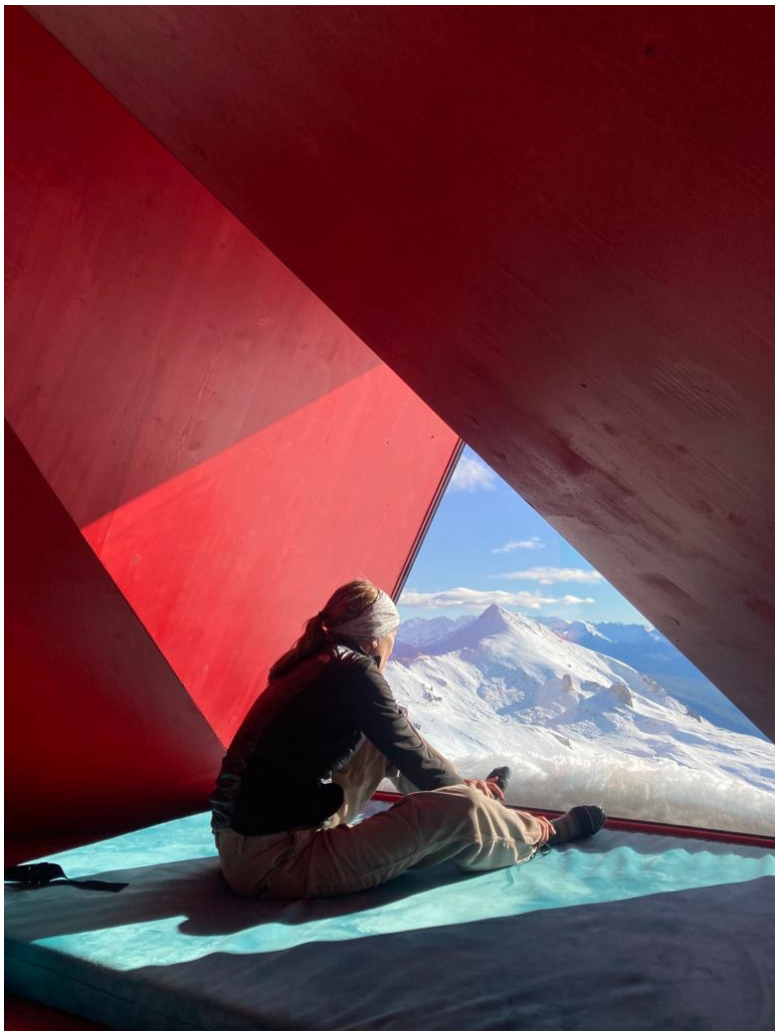

pinwheel shelter

A discreet intervention in the alpine landscape taking the form of a rigid tent with a faced shape and designed following the analysis of sun exposure and wind directions.

A design project fostering a continuous dialogue between the architecture, the valley's morphology and its atmospheric agents.

The reduced internal height and the sloping roof put the alpinists in a condition similar to the one we can experience inside a tent.

An atmospheric architecture, engaging in a dialogue with the light, colors of the rocks, and the surrounding slopes.

The primary purpose of the project is the installation of a light, minimally invasive and totally reversible structure.
