

Metro Shenzhen Changzhen Office Building

Shenzhen Metro Changzhen Depot Complex Project is required by the Client – Shenzhen Metro Group to meet office and accommodation demands of Shenzhen Metro Line 6 staff. The project is located in Guangming District, Shenzhen, which is an innovative landmark to enhance and demonstrate the cultural image of Shenzhen Metro.

Under the requirements of the function of Changzhen Complex, this project takes the culture and image logo of the subway as the design concept, highlights the characteristic image of the subway, and deducts the linear, speed and tandem subway characteristics into architectural forms and spaces. The overall effect not only gives an elegant and dynamic visual impact, but also plays a good role in the image of the city subway building.

The project reflects the linear symbol of the subway in the architectural form, emphasizing the orderly beauty of the architectural form and the horizontal lines to achieve a visually pleasing effect. While the building facade uses white aluminum panels and ultra-white glass curtain walls to show the speed of the subway and modern sense.

The land is divided by the test line and the wheelhouse, and the complex is placed on the west side of it; the west land is more effective, so the high-rise complex will be more in line with the iconic requirements. The dormitory with a certain independent function and the attached building block of the police station are located on the east side of the land. The two are both connected and relatively independent. At the same time, in order to display the elegant and dynamic architectural image, the proportion and functional area of the original complex and dormitory are

adjusted. Also the building area and height of the complex are increased, making the building more upright and dynamic.

Shenzhen is a dynamic and innovative young city, and Shenzhen Metro is also a benchmark enterprise that has grown up in Shenzhen. It has a strong innovative spirit for the city's future rail transit and transportation architecture, so to interpret the subway culture and spirit of this unique city in Shenzhen is a necessary task.
