

# MatrixX Architectures by Peter Stasek

The architectural concept MatrixX Architectures has been developed by the architect Peter Stasek and represents an innovative concept for architecture projects taking into account organic shapes and natural structures. Next to the progressive materials, the digital fabrication is amongst the most important creative components. An additional element of this concept is the inclusion of AR (augmented reality) in the form of audio and video surrounding concepts as well as holographic projections for visual space and structure expansion. The functional implementation of the projects is marked by an individual building and interior design and substantially contributes to the corporate identity of the company in the form of corporate architecture. The most important clients of MatrixX Architectures by Peter Stasek comprise multinational groups from the fields of new business development, biotechnology and lighting industry, operators of healthcare facilities, shops, shopping malls and others. Another project line is the development of facilities for renewable energies and environmentally friendly waste management. The creative main features of the projects of MatrixX Architectures by Peter Stasek are environmental soundness, steadiness and sustainability. The architectural projects by Peter Stasek have globally been presented on numerous architectural and design platforms and published by international publishing houses.
