Base Cabin  
Press Release

## Base Cabin

Designed by Studio Edwards

A mobile retreat providing a fresh design approach to the 'micro-home' typology. Designed to be transported on a trailer & wheeled into its desired location. Providing an intimate connection to nature & the great outdoors.

The design is inspired by the A-Frame cabin & iconic airstream trailer. The A-frame structurally efficient & using less material than conventional portal framed buildings. Mute in its appearance & clad in black rubber to blend into its surrounds. A cosy sleeping space sits below the A-frame roof with triangular window framing views outwards. The central toilet & shower pod is bathed in light from the roof-light above. A sink and small counter fitted to the rear of the pod provide kitchen functionality with a window ledge adjacent to the large operable glazed facade.

Minimal impact to the landscape & easily relocated due to its mobility  
Using natural materials for the interior creating a warm, inviting & tactile space  
Provides a cost-efficient alternative to compared to that of building a dwelling  
Its unique design creates desirability for small space living - promoting the notion of living with less. Increased awareness of sustainability & resources.

## Built by Base Cabin

Base Cabin is a custom builder of high quality, architecturally designed tiny homes. Collaboration with designers is at the core of what we do. Whilst the cabins we build are small in size, we seek out the best finishes to incorporate them into our spaces. We believe in quality over quantity. Because our build process is highly collaborative and flexible, we have the ability to incorporate great ideas as we build. We intentionally keep an open mind as we understand every client has different needs and drivers for what they want to achieve with their cabin. We think that you don't need excessive space to enjoy the pleasures of escaping and enjoying the natural environment. Our cabins are designed to not only deliver an exceptional experience, but to also connect within the landscape.
