While variability of experience is an important goal of the piece, the system has been designed with efficiency of fabrication and installation in mind. Within a field of nearly 6,500 individual pieces, there exist only three different piece lengths and three different fold angles - strategically rotated and distributed to create the illusion of infinite variability across the canvas of the façade.

The metal panels are to be anchored to a lightweight metal tubing system - the size and specific material of which will be specified in accordance with advice from a structural engineer as the project evolves.
