

Greenbelt factory in Emilian countryside, Ferrara (Italy). Innovate by harmonizing the man's action to the Nature's order

Nature will inhabit pylons and pergolas, building and artificial landscape that resonates with the natural landscape

The new backbone of the open-air agricultural gallery, a walkway cultivated in the form of a green decumans measured by the rhythmic warp of the crossing profiles between the two buildings

The prefabrication of the entire system allowed the integral coordination of all the construction elements

Recovery of the original space of the individual modules and insertion of new metal frames inside them.

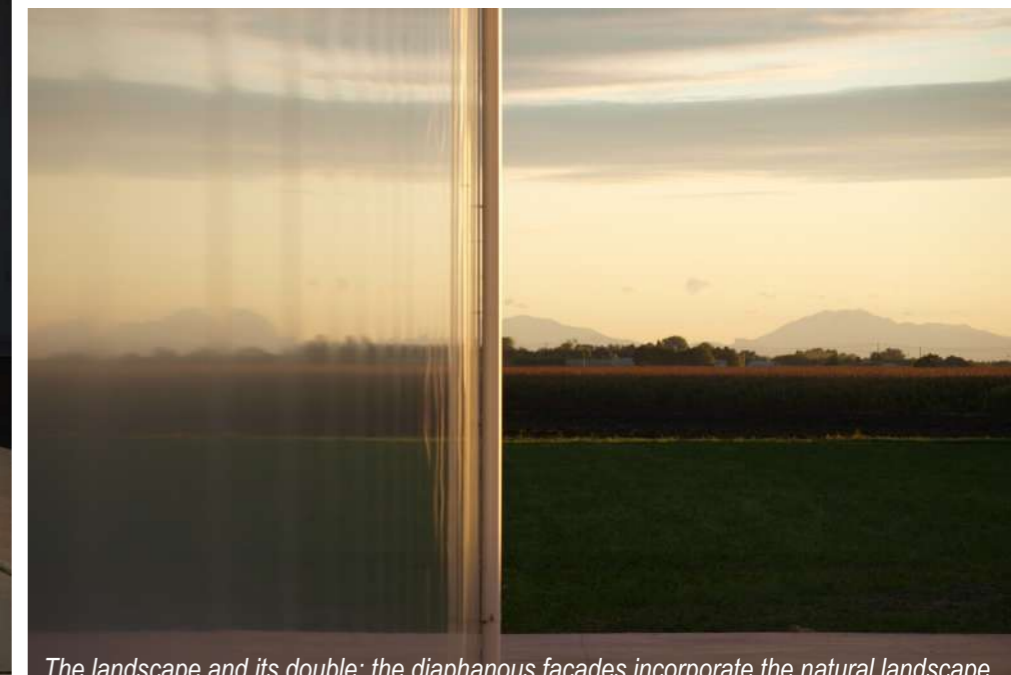

The conception of space and serial production qualified as factors at the basis of technological progress and the democratic education of society. Industrial production as a vehicle for construction quality within everyone's reach.

Median walk cultivated towards the countryside

'Agricultural gallery' towards the rural horizon as the seasons and light conditions change.

The landscape and its double: the diaphanous facades incorporate the natural landscape, doubling the rural horizon
