Gemss®

RADIANCE

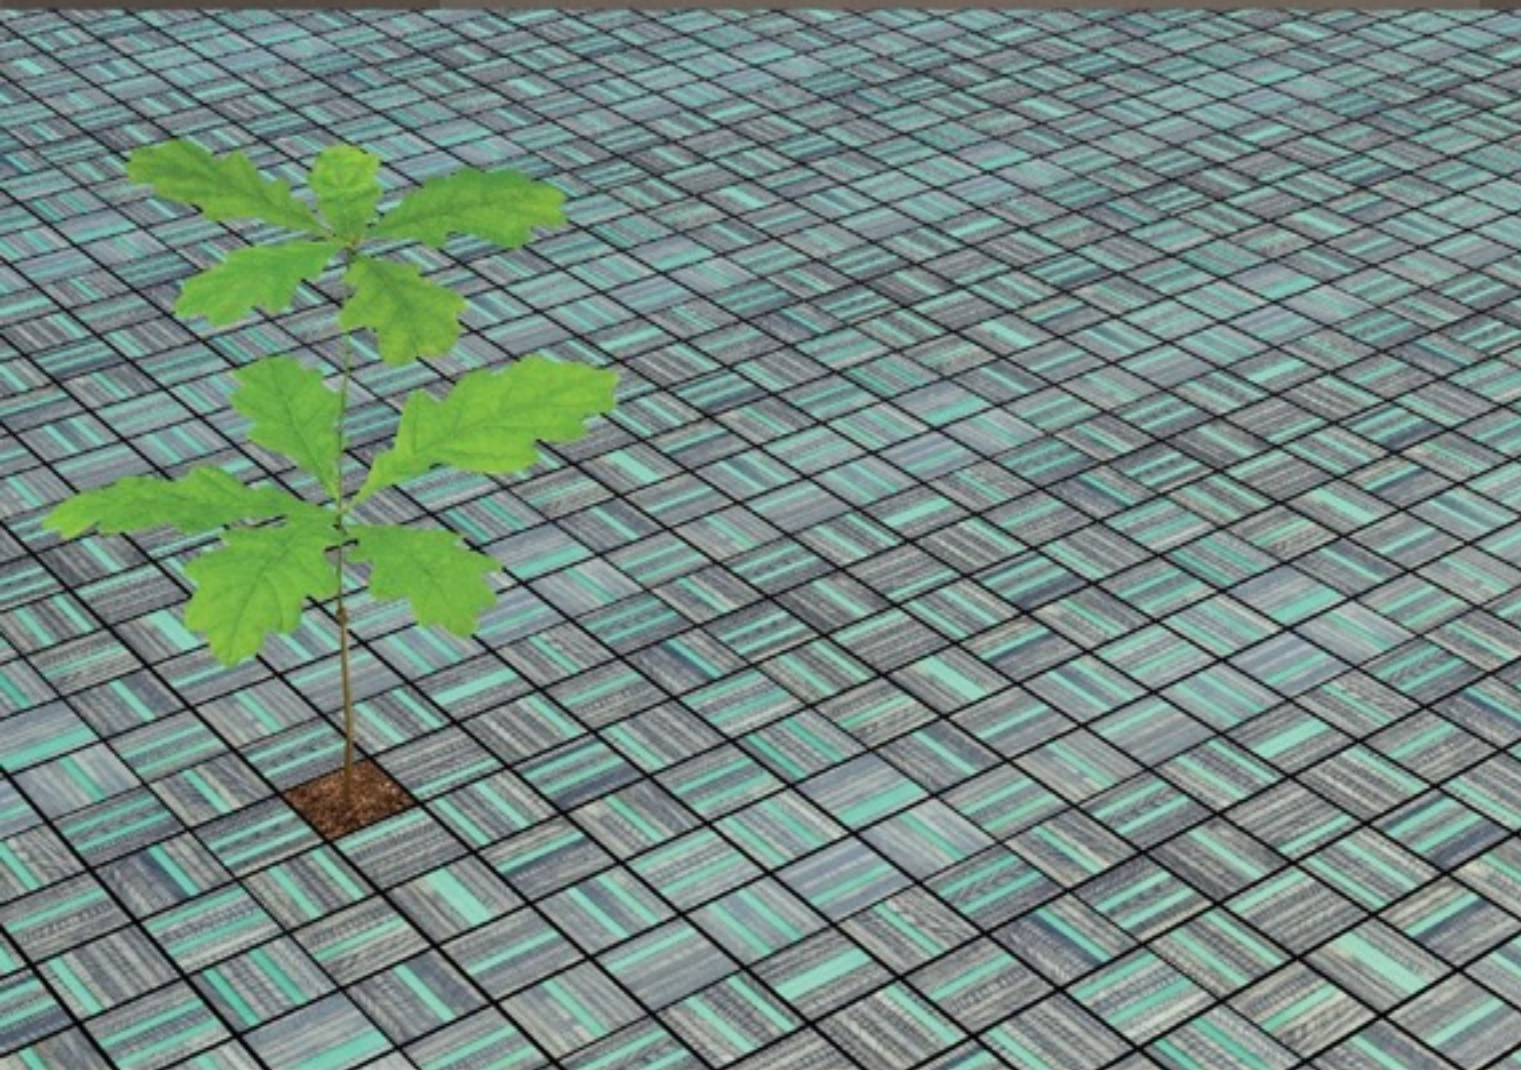

RADIANCE

Introducing the all new Gemss Radiance - Illuminating Surfaces from the house of Natural. Natural Veneers have once again come up with ground breaking innovation in wood surfaces by creating radiance series of wood mosaics.

It is a first of its kind unique combination of wood with colored resins that take functionality of wood surfaces to the next level. Gemss radiance is designed to recreate the magic of onyx stone with natural & fumed wood.

The uniqueness and exclusivity of Gemss Radiance is appreciated and recognized on a global platform. This product is actual Red Dot Design Award winner 2012 for high quality design that expresses innovation in form & function. This product is also physically displayed at the Red Dot museum in Singapore.

As we move forward we intend to offer a complete range of backlit wood surfaces for interiors. We anticipate your whole hearted support in our latest endeavor in the surfacing world.

Eco Friendly

Gemsa mosaics are created from remainder timber logs that were conventionally discarded as waste after creating wood veneers. By using Gemsa wooden mosaics, you reduce the need to cut more trees to get the lumber and go one step further in sustainable and eco-friendly design. With its modular tile format, it helps in minimizing wastage during application and can be used to clad surfaces of any size with uniform appearance.

Flexible

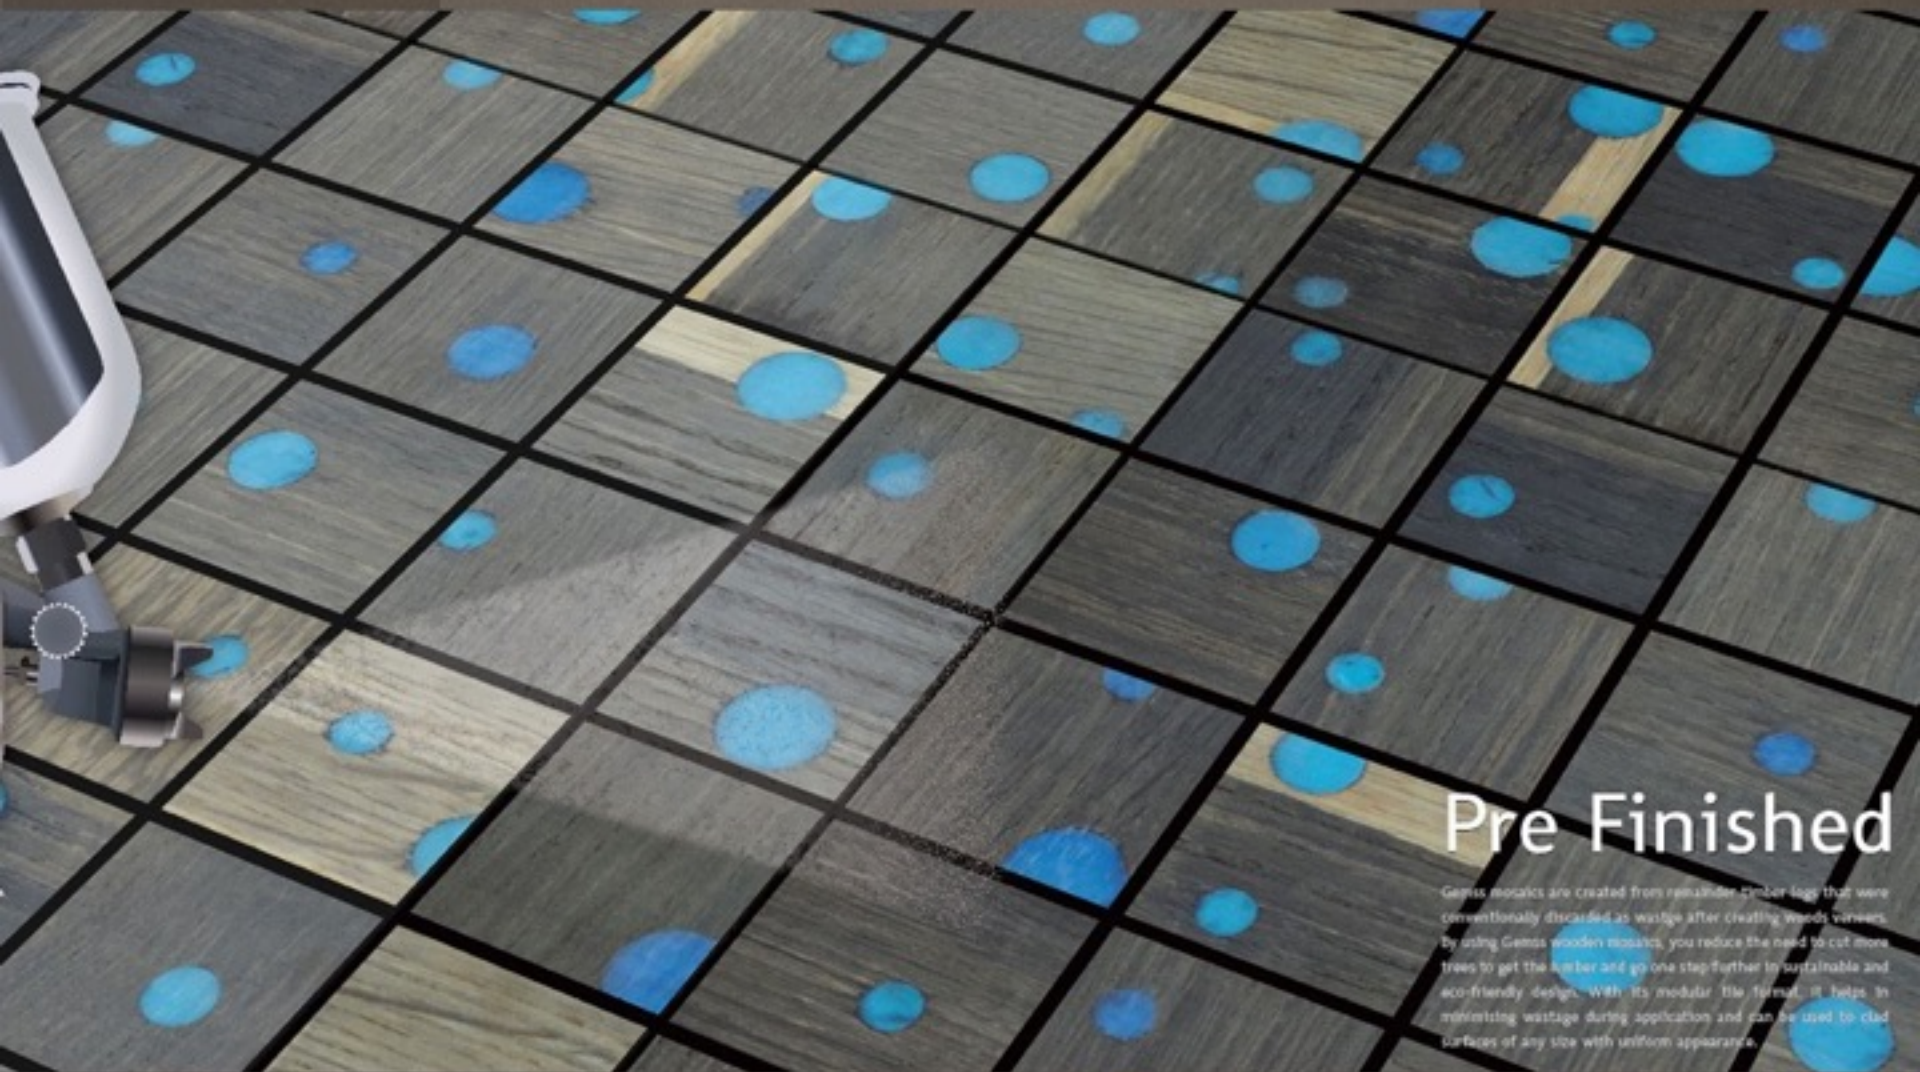

Gemss mosaics tiles and sheets are created with precision, backed by meticulous engineering and stringent measures of quality control resulting into very high levels of production quality and utmost consistency across different batches of production. As a cladding material, Gemss recreates the sophistication of richly crafted wooden surfaces with lesser degree of skill required for its application vis-a-vis surfaces crafted by traditional craftsmen. Application of Gemss over any surface and its finishing is done much faster as compared to application of traditional wooden products.

Sharp Cutting & Grooving

Gemas mosaics are created from remainder timber logs that were conventionally discarded as waste after creating woods veneers. By using Gemas wooden mosaics, you reduce the need to cut more trees to get the lumber and go one step further in sustainable and eco-friendly design. With its modular tile format, it helps in minimizing wastage during application and can be used to clad surfaces of any size with uniform appearance.

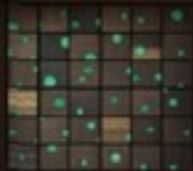

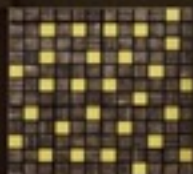

Pre Finished

Genas mosaics are created from remainder timber logs that were conventionally discarded as waste after creating wood veneers. By using Genas wooden mosaics, you reduce the need to cut more trees to get the lumber and go one step further in sustainable and eco-friendly design. With its modular tile format, it helps in minimizing wastage during application and can be used to clad surfaces of any size with uniform appearance.

Pre Glued

Gemas mosaics are created from splintered timber logs that were conventionally discarded as waste after creating wood veneers. By using Gemas wooden mosaics, you reduce the need to cut more trees to get the lumber and go one step further in sustainable and eco-friendly design. With its modular tile format, it helps in minimizing waste during application and can be used to clad surfaces of any size with uniform appearance.

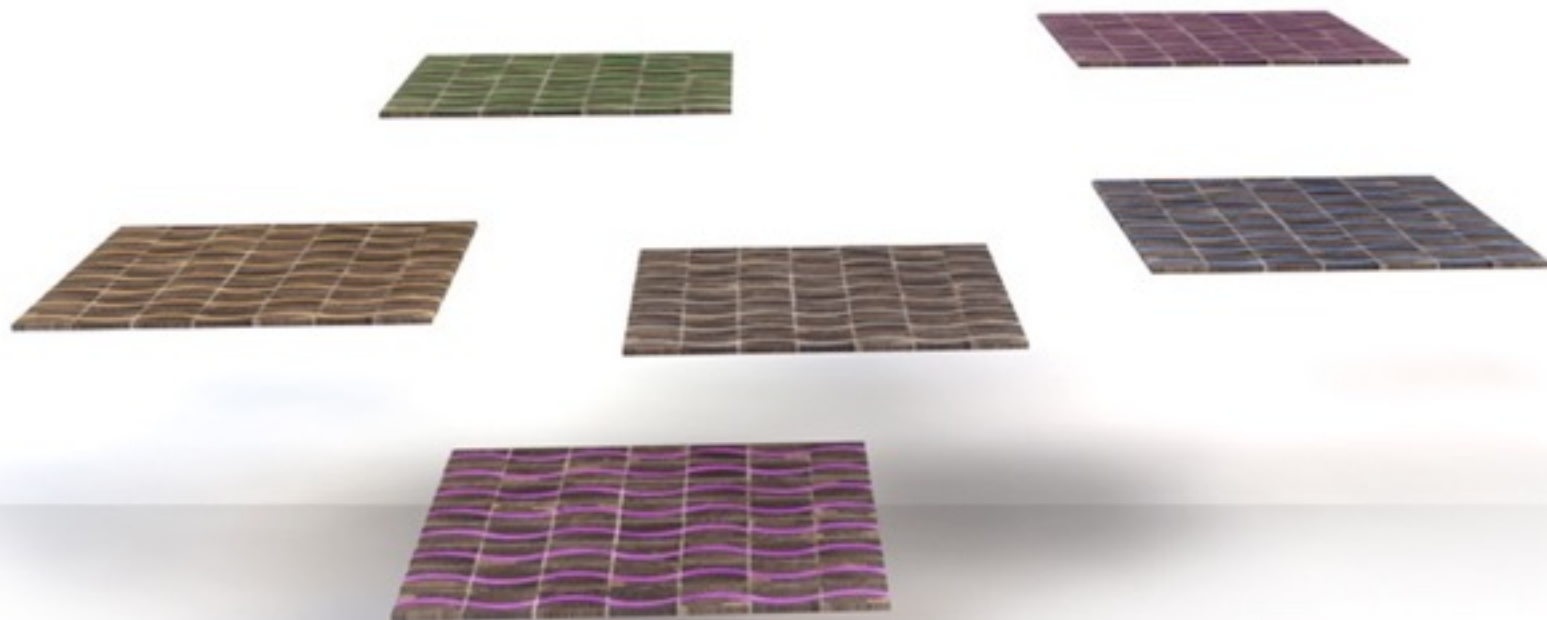

Backlit Mosaics

Gemiss mosaics are created from remainder timber logs that were conventionally discarded as waste after creating wood veneers. By using Gemiss wooden mosaics, you reduce the need to cut more trees to get the lumber and go one step further in sustainable and eco-friendly design. With its modular tile format, it helps in minimizing wastage during application and can be used to clad surfaces of any size with uniform appearance.

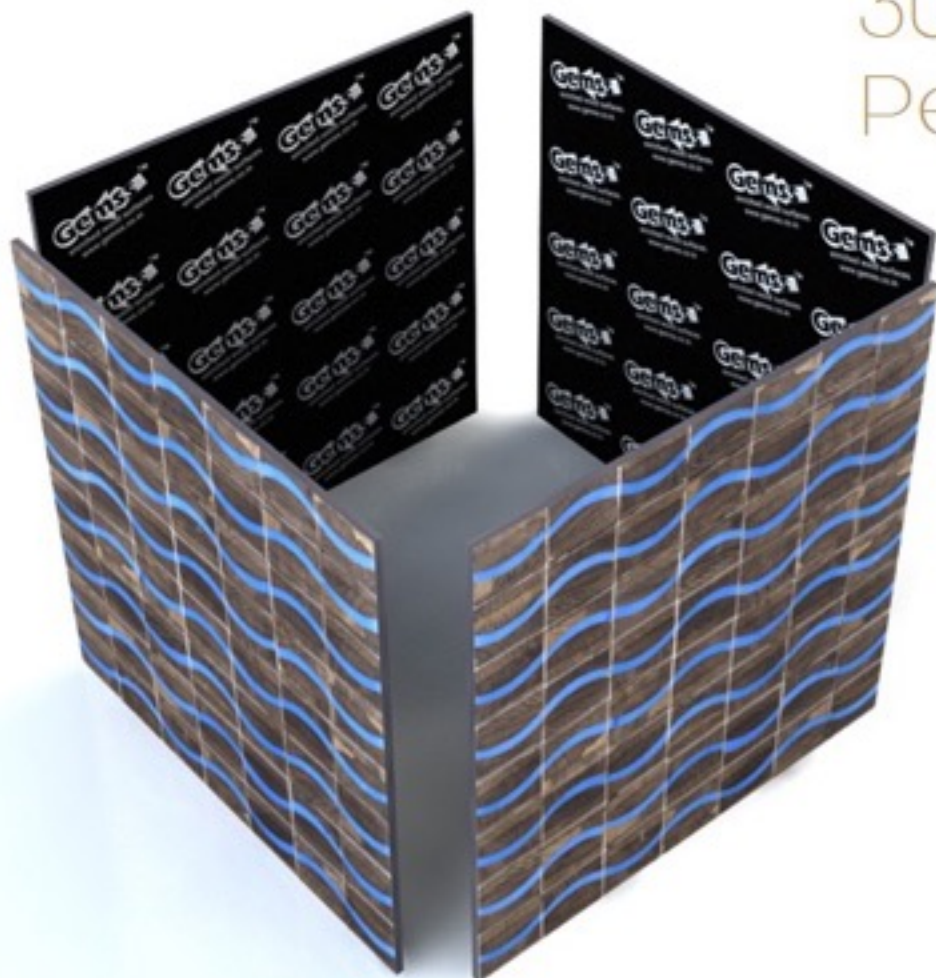

Colors

Wide variety of colors options available

Horizontal
& Vertical Grains

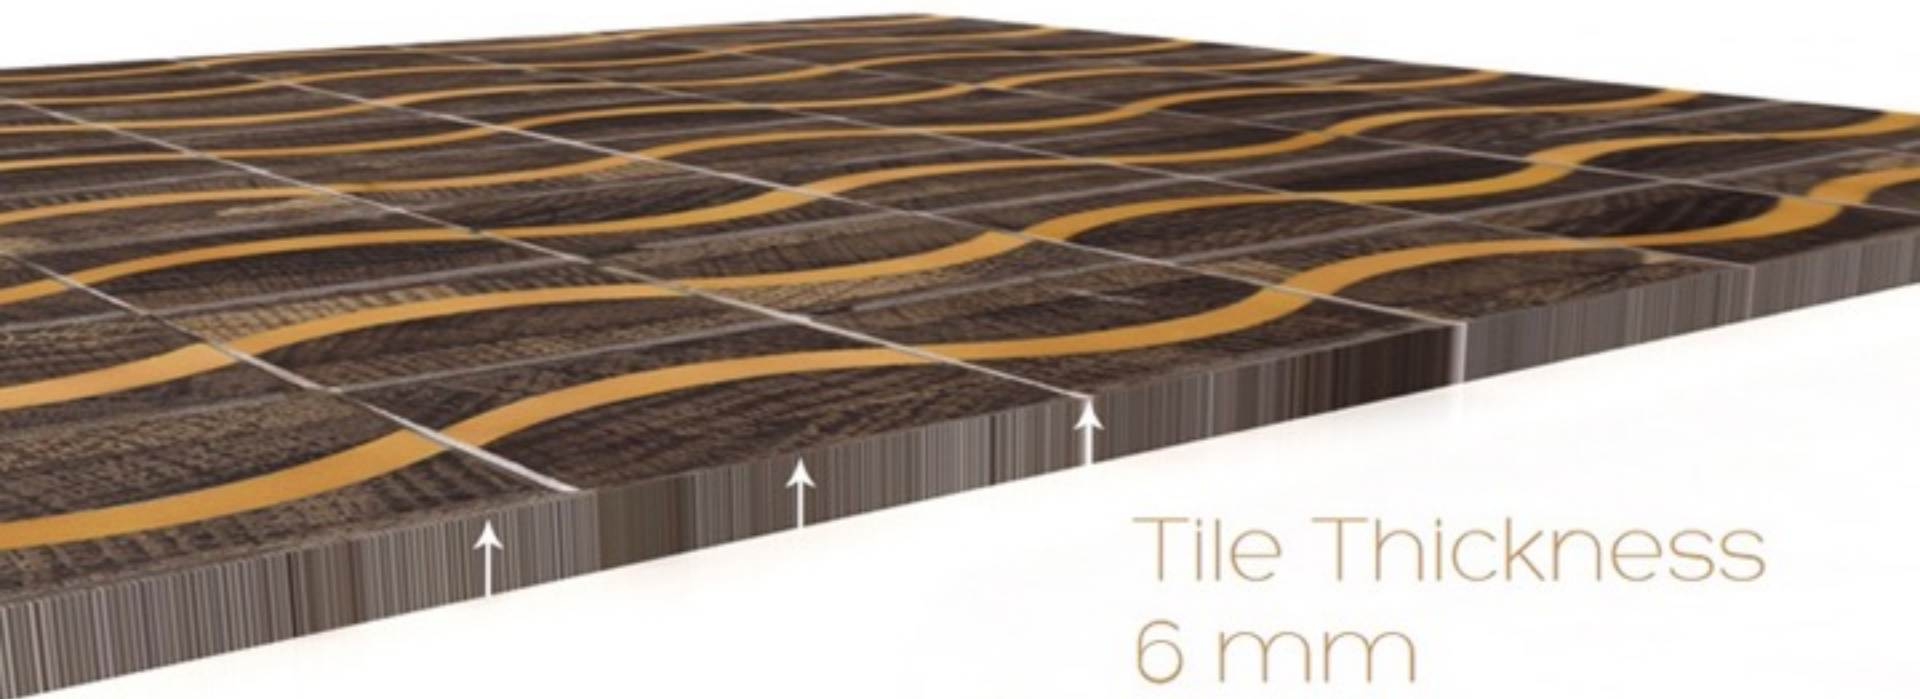

300 mm x 300 mm
Perfect Dimension

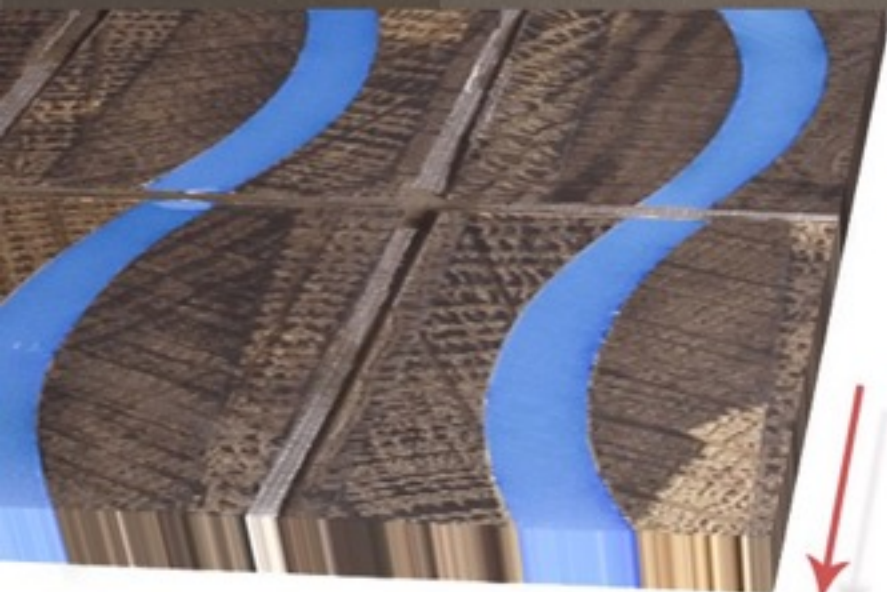

Pre-Glued

Finished Sheets Come with Peel-n-Stick glue line for easy Application on Glass & Acrylic

Tile Thickness
6 mm

Tile size
50 mm x 50 mm

Tiles per Sheet - 36

Resin

High Grade Unsaturated Pigmented Polyester Resin

Back Lit

Translucency of Resin Allows Lighting From The Back

reddot design award
winner 2012

We at NATURAL continuously strive to envision and create handcrafted wood surfaces that express innovation in application forms. Winning the Red Dot Design Award 2012 has conferred international acclamation onto product design team for exemplary design quality. As we move forward we commit to augment wood surfacing solutions for finest aesthetic needs.

THANK
YOU
