Italian Openings & Automation

— SINCE 1954 —

UFO

the extra gate

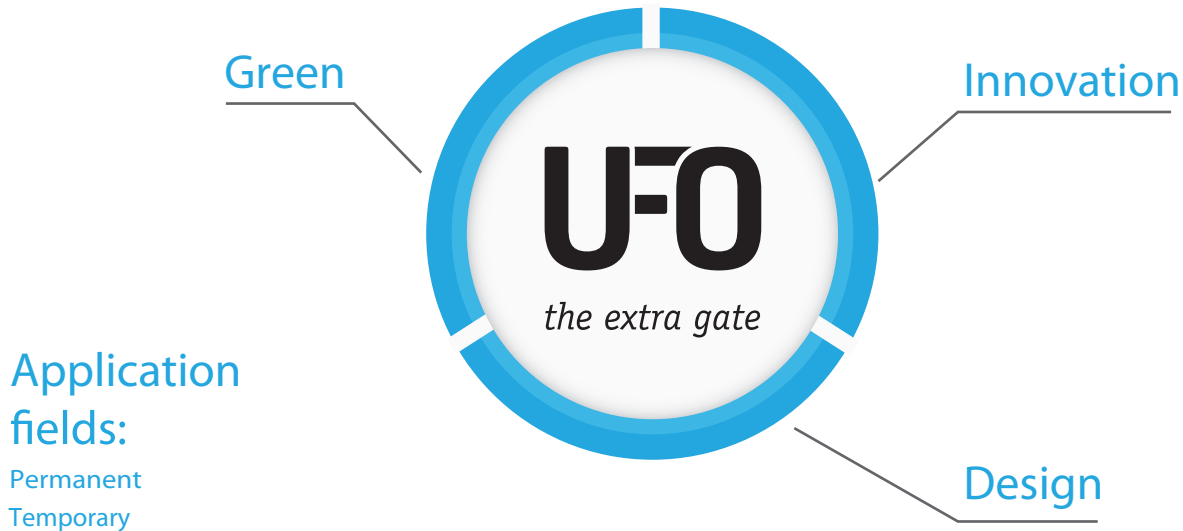

UFO is a product and service innovation. The project arises from the collaboration with the Department of Energy Politecnico di Torino.

The technologies used have been the results of a research process that has led to the development of prototypes and the testing phases, with simulations in Europe, Africa and Asia.

UFO wants to meet the global demand especially in areas with a challenging environment for the energy supply.

Features:

- Solar energy
- 100% self standing
- Innovative design
- High modularity
- Ease of installation
- Save in laying

Application fields:

Permanent
Temporary

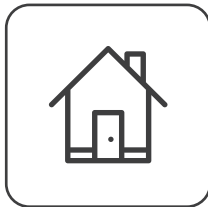

UFO brings domotics out of your home.

Solar feeding enables you to control an access regulator for outdoor areas via a mobile application, and it will be placeable wherever you wish.

UFO makes easier and faster the access control in outside areas planned for sports or musical events, temporary or permanent activities, where a controlled entrances system is required.

- 3 Install the access barrier self-sustained via solar energy
- 4 Download the application that provides you the password necessary to the barrier operating
- 5 And there you are!

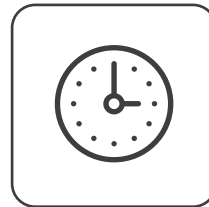

standard

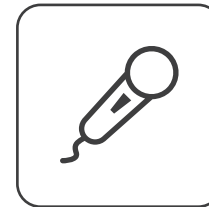

off the grid

temporary sites

events

Areas of use:

STANDARD

domestic, private, public

OFF THE GRID

remote areas without connection to the grid

TEMPORARY CONSTRUCTION SITES

remote areas without connection to the grid

EVENTS

sports events, concerts, ecc.

The extra gate: It wasn't there. Then it was!
