The Treadom by YokYok

size: 11x11x10m

materials: wood, stones, lights

client: City of Alberobello

organizer: Light Festival

curator & production: Lightcones

realization: YokYok

light maecenas: Sammode (France)

engineer: Milae (France)

event: Alberobello Light Festival 2023

date: July 22nd to January 22nd

location: Alberobello, Italy

The City of Alberobello, in the Puglia region in the south of Italy, invited YokYok to install *The Treadom* for the Light Festival 2023.

The Treadom is a social installation for public space. It shapes a geometrical forest acting as a symbolic signal and offering benches and bar counters for the people. It is about a small architectural landscape evoking “*il bosco*” like the forests that were present in the ancient times of the city. Designed for a public square, it has been adapted to the slope and the pavement using local stones from one of the numerous quarries of the region. This mineral addition makes a link with the local architectural history based on the first resource of this karst region: the limestone. This abundant resource of the area is at the origin of the famous Trullo architecture, making Alberobello recognised a UNESCO World Heritage Site.

The Treadom
structure & spaces

The woodwork has been done with a team of builders on site and by night during one of the hottest week of this year 2023. It is structurally simple and low-tech. Vertical poles, horizontal benches, stones weights, and a lot of triangulation above made by a bunch of boards. The result is a strong structure designed for people and delicately put on a public square.

The benches&bar counters have a structural role. They link the poles together and stabilize them, avoiding people to move them at the lower part. The installation has no foundations. It is directly put on the pavement which couldn't be drilled through, as being part of UNESCO protected site. Finally they create social spaces for encounters and a labyrinthic circulation that invites people to get lost and experience the installation from inside.

The Treadom
Lighting

The installation lies in two elements:

- a luminous canopy - acting as a signal & symbolic silhouette
- a functional ground floor, offering use, to rest and sociabilize

The Treadom
Lighting

The lighting of the installation is composed of 34 fluo T5 tubes with the support of the french firm Sammode, specialized in architectural lighting.

Sammode

*for any publication please mention
«Sammode maecenas of the Treadom lighting»*

The concept of the plan is simple: to link all the poles together with at least a bench or a bar counter and to let a free circulation on the pavement of the square remaining inclusive and accessible for disabled people. Small spaces are created to foster encounters and discussions.

The stones make the space a bit more chaotic and bring a natural touch to this labyrinthine geometrical forest. They have a structural role, to weight the installation and stabilize the pole bases in the direction which is not secured by a bench.

Finally, these simple construction principles allows the project to be economical, local, dismantlable and re-usable.

The Treadom Principles

The pole bases with only one bench still can move in one direction...

With stones, they are blocked in both directions.

Plan of the Treadom allowing it to be crossed by multiple paths

We design for **people**. We want to **create encounters**. We want to focus on **social & physical interactions** because we think they are **essential** in our post-covid times, to **disconnect** from screens, to enjoy **authentic moments**.

We also believe that people needs to keep a physical contact with space. **Simple constructive details & materials** like stone, wood and warm light can help to it.

Here, just woodwork, elbow grease and comfortable benches to sit on. A tribute to **low-tech**.

Finally, the Treedom is nothing more than a **place to meet**.

Atelier YokYok

YokYok est un studio de création fondé en 2015 par Samson Lacoste et Luc Pinsard architectes. Il se compose aujourd'hui de quatre têtes, avec Laure Qarémy enseignante et Pauline Lazareff architecte-ingénieur.

Le travail de YokYok se situe entre l'art et l'architecture. Il explore à travers des installations immersives le rapport au corps, la matière, l'expérience sensorielle, la géométrie et le paysage. Parfois in situ, parfois nomades, ces installations jouent avec l'architecture et remettent en cause leur environnement en décalant ses fondamentaux avec humour. YokYok crée des oeuvres et des installations dans des contextes variés tels que festivals, musées, jardins, places, espaces privés ou équipements publics. Il aime raconter des histoires, tisser un imaginaire et poser un regard poétique sur les lieux qu'il découvre.

Atelier YokYok

YokYok is an artistic design studio founded in 2015 by Samson Lacoste and Luc Pinsard architects.

It is today composed by four heads, including Laure Qarémy professor and tttt Lazareff architect-engineer.

YokYok's works take place between art and architecture, around human body, materials and sensitive experience. Keen of installations to be experimented in a playful way, YokYok proposes interactive, and unexpected architectural curiosities. YokYok creates artworks and installations in various contexts as festivals, museums, gardens, public squares or architectural projects. He likes to tell stories, to forge an imagination and to look at new places with poetry.
