

ZOOCO ESTUDIO PROFILE

ZOOCO ESTUDIO is a young architectural firm founded in 2008 by Miguel Crespo Picot, Javier Guzmán Benito and Sixto Martín Martínez, with head offices in Madrid and Santander.

ZOOCO ESTUDIO's philosophy is facing each project, from interior interventions to large structures building, through the same creative process.

Developing projects with different scales, we realize that architectural decisions are always the same: to create spaces that give response to needs and environment, always based on the generation of a clear concept as the base of the project.

This vision of architecture and the flexibility to adapt to different projects, has made us understand our profession at a time of social and economic crisis.

ZOOCO ESTUDIO tries to project with fine materials and simple shapes to achieve a timeless and functional aesthetic. We always search for neutral spaces and projects that last over the years. With this objective, we combine the research into new materials and systems, with the knowledge of traditional processes.
