

KEY FIGURES ELBPILHARMONIE

SUBJECT AREA	KEY FIGURES
AREA OF THE BUILDING	
GFA of whole building	Approx. 125,512 sq. m
- Of which GFA of warehouse	Approx. 61,333 sq. m
- Of which GFA of new structure	Approx. 64,179 sq. m
GFA of concert area	30,121 sq. m
GFA of plaza	5,745 sq. m
GFA of plaza, public area	Approx. 3,100 sq. m
GFA of hotel	Approx. 27,000 sq. m
Number of rooms	244
GFA of multistorey car park	22,736 sq. m
Number of parking spaces	520
GFA of residential units	12,801 sq. m
Number of apartments	45
GFA of eateries	1,332 sq. m (4% of the building)
GFA of eateries and conference facilities	3,631 sq. m
GFA of general areas (staircases, thoroughfares, equipment rooms)	16,387 sq. m
Total weight of the building:	Approx. 200,000 t
Height of former Kaispeicher A warehouse	35 m
Height of plaza level	37.2 m

WAREHOUSE DIMENSIONS	
Length of northern side	108.6 m
Length of eastern side	85.1 m
Length of western side	21.6 m
Length of southern side	125.9 m
HEIGHT OF THE ELBPILHARMONIE	
Highest point, western side	110 m above sea level (Approx. 102 m above street level)
Lowest point on the roof	78 m
ROOF	
Area	6,200 sq. m
Number of roof sections	8
Weight	Approx. 700 t total
Number of steel girders for the whole roof	Approx. 1,000 girders
Special features	Each girder is unique and made from sheet steel, 3D design
Roof sequins	
- Quantity	Approx. 5,800
- Diameter	0.9–1.1 m
- Material area	4,160–4,727 sq. m
- Perforations	11–15 mm
Special features and material used for the roof sequins	Safe to walk on, aluminium panels, deep-drawn perforations, polyester powder coating

FOUNDATIONS	
Level of the ground floor raised by 3 m for the new Elbphilharmonie structure	Ground floor 8.50 m above sea level (HafenCity is at the standard flood protection height of 8 m above sea level)
Pile foundations: Retrospective reinforced-concrete pile foundations (supplementing the 1,111 existing piles beneath Kaispeicher A)	1,745 634
Depth of the in situ concrete piles	Approx. 15 m
CONCERT AREA	
GRAND CONCERT HALL	
Number of seats	Approx. 2,100 (Laeiszhalle grand hall (2,027 seats) Berlin Philharmonie (2,440 seats))
Maximum distance from conductor	30 m
Lowest circle seats (height)	Approx. 51 m above sea level/12th floor
Highest circle seats Highest point of outer shell	Approx. 68 m above sea level/17th floor Approx. 88 m/23rd floor
Diameter	Approx. 30–50 m
Height	Approx. 25 m
Number of entrances to the grand hall - For performers/backstage - For visitors	3 entrances on the 12th floor (north, south, west) 12 entrances

REFLECTOR	
Diameter (oval, bottom)	15 m
Length	10 m
Weight - Steel structure only - Steel incl. payload, stage equipment and white-skin cladding	24 t Approx. 100 t
Components	Stage equipment (chain and cable hoists) Stage lighting Speakers 4 organ registers (remote console) - LED lighting around the edge of the circle and lights within the structure; the lower part pointing towards the hall is covered with white skin and a thin membrane is stretched over the upper part of the reflector (indirect, dimmable lighting for the hall)
Area (hall floor and steps) Hall floor area	3,300 sq. m Approx. 2,590 sq. m
Volume	23,000 cu. m
Weight	12,500 t
Stage area	270 sq. m
Distance between the outer shells	~ 1.30 m (0.2–4 m)
Number of springs (steel springs affixed between the reinforced concrete ribs via brackets on the outer shell and a steel structure on the inner shell)	362
Steel used during construction (excl. steel roof structure)	Approx. 1,100 t

INNER CLADDING, »WHITE SKIN«	
Area of the white skin	6,500 sq. m
Material used for the white skin	3D-milled gypsum fibre panels
Number of gypsum fibre panels	Approx. 10,000
Size of each panel	0.5 sq. m
Weight of each panel	Approx. 30–125 kg
Total weight	400 t
RECITAL HALL	
Area	Approx. 440 sq. m
Lowest point	Approx. 41.36 m/9th floor
Highest point	Approx. 56.27 m/13th floor
Accessed from	10th floor
Number of springs	56
Number of seats	550 (Laeiszhalle recital hall (594 seats) Berlin Philharmonie (chamber music hall 1,180))
Flooring	Parquet strip flooring, natural oak
Wall	3D-milled wooden panels (micro-shaped), oak
Doors	3D-milled wooden panels (micro-shaped), oak
Ceiling	Ceiling in the hall made from reinforced concrete, coated black, with pendant luminaires Ceiling underneath the catwalks (suspended ceiling): 3D-milled wooden panels

THIRD CONCERT HALL/KAISTUDIO 1	
Area	133 sq. m (3rd floor) 174 sq. m (2nd floor)
Height (lowest to highest point)	2nd floor to 3rd floor
Number of seats	150 (Laeiszhalle Studio E (170 seats))
FOYER	
Foyer staircases in the concert area	2
Walls	Smooth, chalk-based mineral plaster
Length of the bar, 13th floor	21 m
CURVED ESCALATOR (LARGE)	
Length	Approx. 80 m
- Steel substructure per step	Consisting of 14 paired elements
- Vertical lift	21.43 m
Incline	11° to 23°
Speed	Normal speed 0.3 m/s – takes approx. 4.4 min. to reach the top
Number of sequins	8,000
PLAZA ESCALATOR (SMALL)	
Length	20 m From 6th floor to 8th floor
Incline	17.25°

LIFTS	
From public area to plaza (ground floor to 8th floor, excl. apartments, hotel and eateries)	4 banks of lifts/9 cabins
Total in the plaza and Philharmonie	11
Total in the private area	11
Total goods lifts	3 (3.5 t/4 t load capacity)
Firefighting lifts	4
Total lift systems	29
Staircases	11
MATERIALS	
Steel used during construction of the Elbphilharmonie:	18,000 t (14,000 t reinforcing steel, approx. 4,000 t structural steel)
Concrete used	63,000 cu. m (12,000 cu. m foundations, 51,000 cu. m shell, 2/3 exposed concrete) (30 different types of concrete in total)
FACADE	
Glass elements (each element consists of 2-3 panes)	Approx. 1,100, each with 2-3 panes
Panes of glass (total)	Approx. 2,200
- of which flat panes	Approx. 1,605
- of which spherical curved panes	Approx. 595

Balcony elements made from glass-reinforced plastic («tuning forks») - of which recessed balconies (concert area)	Approx. 103 6
Total area of glass element facade	Approx. 16,000 sq. m
Pane thickness	48 mm
LIGHTING	
Plaza	600 plastic and glass globe lights, half-mirrored LED lights arranged in diamond shapes
Grand hall	1,000 lights, LED globe lights, special hand-blown luminaires made by Zumtobel, dimmable

PROJECT HISTORY

The project Elbphilharmonie Hamburg

The initial idea for rejuvenating Kaispeicher A was of the construction of the MediaCityPort - an office building for the media industry, which was to tower up to a height of 90 metres on top of the Kaispeicher A, with a gross surface area of 50,000 square metres. However, the end of the dotcom boom meant it was never actually built. Originally commissioned by the project developer Alexander Gérard, the star Swiss Architects Herzog & de Meuron came up with a project sketch – the groundbreaking idea of a »Hamburg Philharmonie« – the construction of a concert hall on the historical warehouse, surrounded by commercial facilities and a publicly accessible Plaza. The spectacular design elated the Senate, the city government and the public. In May 2004 the ReGe Hamburg, a project development company owned by the city, was installed as the developer of the Elbphilharmonie Hamburg. The feasibility of the project was assessed and an utilisation concept was prepared, and then the private partners for the construction, the financing and 20 years of operation of the object were determined by means of a European tendering procedure. The contracts were assigned to Commerz Real AG and Hochtief Solutions AG within the property company Adamanta GmbH & Co. The approx. 45 freehold apartments entailed by the project lie in the responsibility of Hochtief as the property developer, who in this specific field cooperates with Quantum AG in a company named Skyliving GmbH.

Construction progress

Following the unanimous approval of the city government, construction work began on 2 April 2007 with the laying of the foundation stone. The Kaispeicher A was first completely gutted, with just the brick facades remaining intact. Then a further 650 reinforced concrete piles, in addition to the existing 1,111, were rammed 15 metres deep into the mud of the River Elbe, so that the building could support the 200,000 tonnes of the Elbphilharmonie Hamburg. On completion of the 26th storey, the last one in the bare brickwork, the topping-out ceremony took place in May 2010. The roof of the hall has been paved in November 2011. The shell construction was completed in November 2013. The installation of the White Skin in the Grand Hall was commenced in December 2013. The facade was completed in January 2014; the roof was sealed in August 2014. The Elbphilharmonie will be inaugurated on 11 and 12 January 2017, although the Plaza will already be publicly accessible from 5 November 2016.

Legal disputes during construction

The building of the Elbphilharmonie Hamburg was accompanied by disputes between the municipal Elbphilharmonie Bau KG and the property development company Adamanta until summer 2013. Supplementary negotiations ended in November 2008 with a settlement (Amendment 4). At this time the costs of the project increased from 272 million Euro that had been forecasted in 2007 to 495 million Euro for the city. 30 November 2011 was agreed upon as the new completion date. In 2010 the Hamburg state parliament launched a parliamentary committee of inquiry in order to determine the causes of the increase in costs. After more disputes and a temporary construction stop, the

project partners signed an agreement for restructuring of the project in April 2013. The restructuring agreement stipulated among other points:

- Additional responsibilities assigned to Hochtief (assumption of any risks related to planning and construction, participation in a newly founded consortium with the architects, guaranteed meeting of quality requirements from the architects and the acoustician Yasuhisa Toyota, contractually warranted intermediate deadlines, as well as a binding date of completion)
- A new construction schedule (handover of the concert venue areas of the Elbphilharmonie by 30 June 2016; final inspection and acceptance of the Elbphilharmonie by 31 October 2016)
- Additional costs for the City of Hamburg (256.65 million Euro for the additional services executed by Hochtief and the architects). Thereby the overall costs for the city result in 789 million Euro. The construction continued smoothly after the restructuring agreement.
