The evolution of Nature...

Krion

Solid Surfaces

KRION® is a new generation solid surface, composed by two-thirds of natural minerals and by a minimum percentage of high resistance resins.

This material has exclusive qualities: hardness, absence of pores, it is durable, antibacterial, resistant, easy to clean, and requires a very low maintenance.

Wide are the chance of employing KRION® in the different environments, for example it is suitable for bathrooms, kitchens, public places, restaurants, hotels, shops, health facilities, exteriors and façades.

Another property of this innovative material is the creative freedom it offers, thanks to the various manufacturing possibilities. The most appreciated are the thermoforming process, backlighting and sublimation of the surfaces.

Furthermore, the exclusive composition of KRION® and the application of the latest developments in production processes, permit to inject the material in moulds in order to create 3-D designs.

Thanks to chemical welding kits, joints and reparations are imperceptible.

The wide range of available colours, from brights to neutrals, permits to realize every project and idea of our clients.

Moreover, KRION® is eco-friendly and 100% recyclable.

With the thermoforming process, it is possible to shape this extraordinary material to obtain curved pieces up to a very narrow radius.

Sublimations consists in reproducing images on the surfaces. This process is suitable for decoration and personalization of spaces in every detail.
