

Maybe

chair

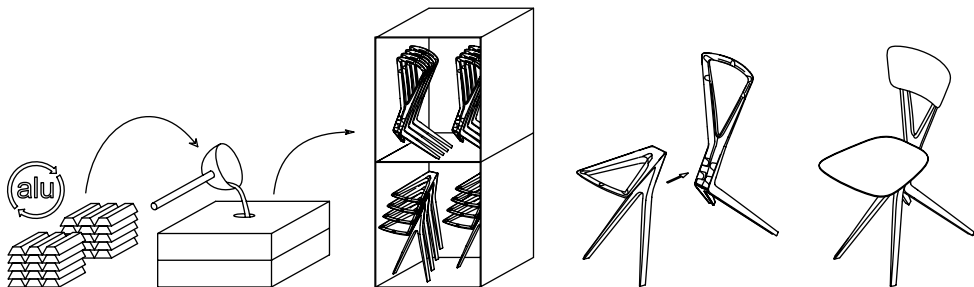

Maybe chair is an hybrid of die-cast aluminium technology with craftsmanship of wood. The main structure is splitted in two part of aluminium die-cast, so it's easy to storage after production and cheaper shipping costs. The seating part and the backrest is made in wood to have a warm feeling when seated. The targhet for this project is a Company that want to invest in shell mouldings to have a quick and flexible production chair with a main structure in aluminium where it's possible to add different kind of seat and backrest depending by the marketplacement.
