

NOTES

The flower colour grid is the same as the construction grid and all the panels have the same numbers

Flower Type

All the blooms are ranunculus. Additional leaves may be required. There should also be grass plants.

Flower numbers

We need to allow for 18 blooms per sq m to include a mixture of multistems and single stems. This is a total of 702 blooms which will also be plenty for the raised 'flower clouds'.

Grasses: Allow an average of 4 per sq m - a total of 150no. 340mm diameter plants and some loose leaves

Flower Colours

The flowers are arranged according to colour as per the approximate grid opposite. The darkest, red flowers are in the store and around the bed, to be toned with display items which match these deeper colours and have a strong traditional Chinese theme. Moving away from the store the palette gradually changes along the colour spectrum to incorporate the pastel shades of the ranunculus petals until at the far right of the installation, beneath the escalator the only flowers are white.
