- Roll Formed and Machined on our premises utilising the most advanced technology and operating systems.
- Scratch, shock and corrosion resistant
- Available in a range of : Standard Colours
Project Specific Alternatives
Custom Colours upon request

Precision machining punches and draws holes along the length of the slats to allow the passage and fastening of ladderbraids, Texband Lifting tapes and coated stainless steel wire guides where required.

Omega Punching, a process by which a horse shoe shaped cleft is produced at various intervals along the length of the slat, ensures correct spacing between the louvres. This facilitates both the incremental adjustment of blade angles and closure, whilst enhancing wind stability.

As with any colour sample or swatch, this brochure is a representation of the evaya 80C Colour Range and is meant as a guide only. Every effort has been made to present these colours as accurately as possible and as closely as modern processes allow. Please note that appearance may vary according to light source. Where accuracy is vital a section of slat can be requested to confirm selection and colour match.

Please feel free to discuss alternatives with one of our representatives who will be more than happy to help you with your selection.
