In every designer application

Gemss[®]

enriched wood surfaces

If you have been wondering about exploring fresh new ideas for imaginative use of wood in the spaces that you design...

If you have been wondering about innovative possibilities of using wood on unconventional surfaces of any size and shape...

If you have been wondering about enhancing the richness of indoor spaces in a sustainable manner with minimum wastage...

If you have been wondering of having all the flexibility of non-wooden materials without compromising on the exquisiteness of wood and the warmth that it adds...

AND if you have been wondering about creating well-crafted sophisticated surfaces without the skills of traditional craftsmen within limited time, you should consider including Gemss in your palette of exclusive materials for interior design, visual appeal of surfaces, forms & spaces you design. Gemss can be used to add exclusivity & uniqueness to your work.

Eco Friendly

Gemss mosaics are created from remainder timber logs that were conventionally discarded as waste after creating wood veneers. By using Gemss wooden mosaics, you reduce the need to cut more trees to get the lumber and go one step further in sustainable and eco-friendly design. With its modular tile format, it helps in minimising waste during application and can be used to clad surfaces of any size with uniform appearance.

Flexible

Gemss wooden mosaics have a fabric backing and offer substantial flexibility in application over surfaces of any size & shape enhancing the visual appeal, feel & warmth created by use of wood. Gemss can be used for application over flat surfaces as well as surfaces with simple & complex curvature offering a far greater flexibility vis-a-vis conventional wood products.

Wide Range

Gemss is a new palette of textures created using a wide array of wood species from across the world in various mosaic patterns providing numerous design options to use wood in unprecedented ways and enrich the quality of spaces designed by you.

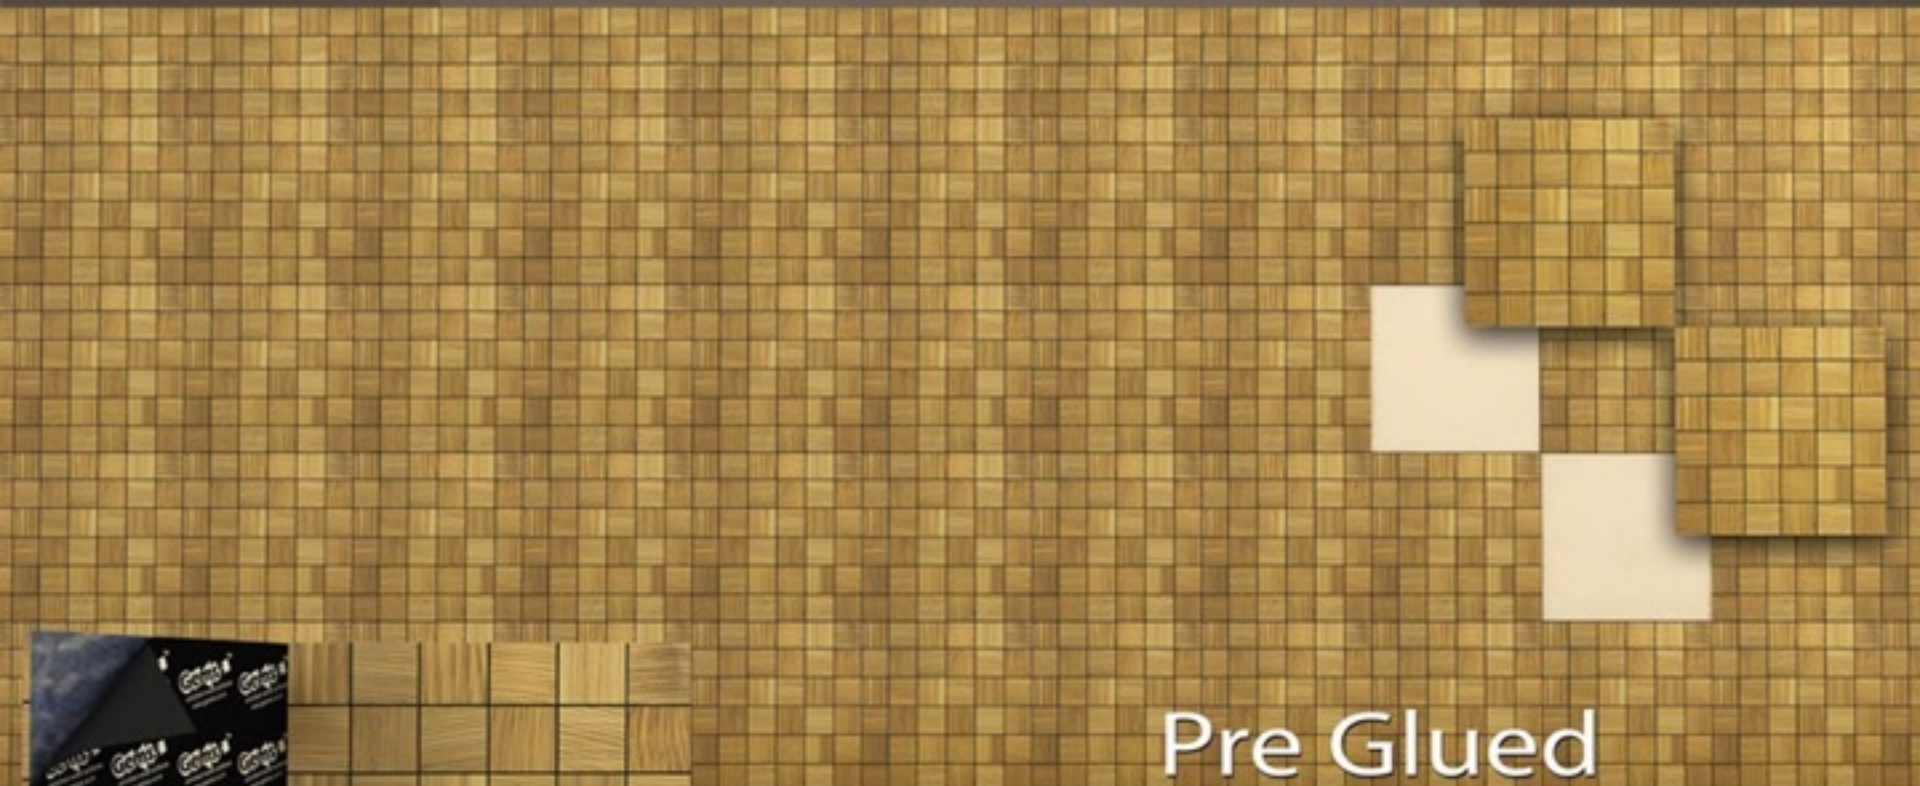

Sharp Cutting & Grooving

Gemss mosaic tiles and sheets are created with precision, backed by meticulous engineering and stringent measures of quality control resulting into very high levels of production quality and utmost consistency across different batches of production. As a cladding material, Gemss recreates the sophistication of richly crafted wooden surfaces with lesser degree of skills required for its application vis-a-vis surfaces crafted by traditional craftsmen. Application of Gemss over any surface and its finishing is done much faster as compared to application of traditional wooden products.

Pre Finished

Pre coated with fine wood composite finishes to get the best surface aesthetics & optics.

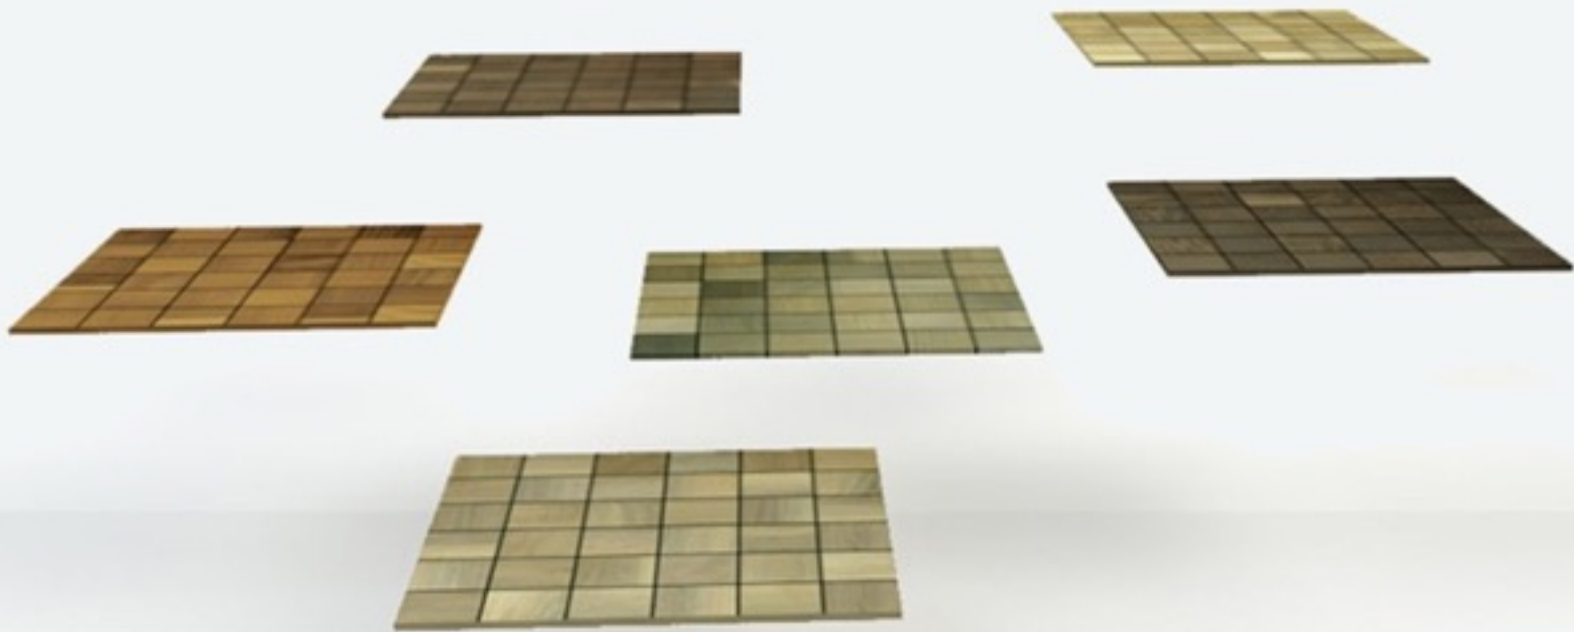

Pre Glued

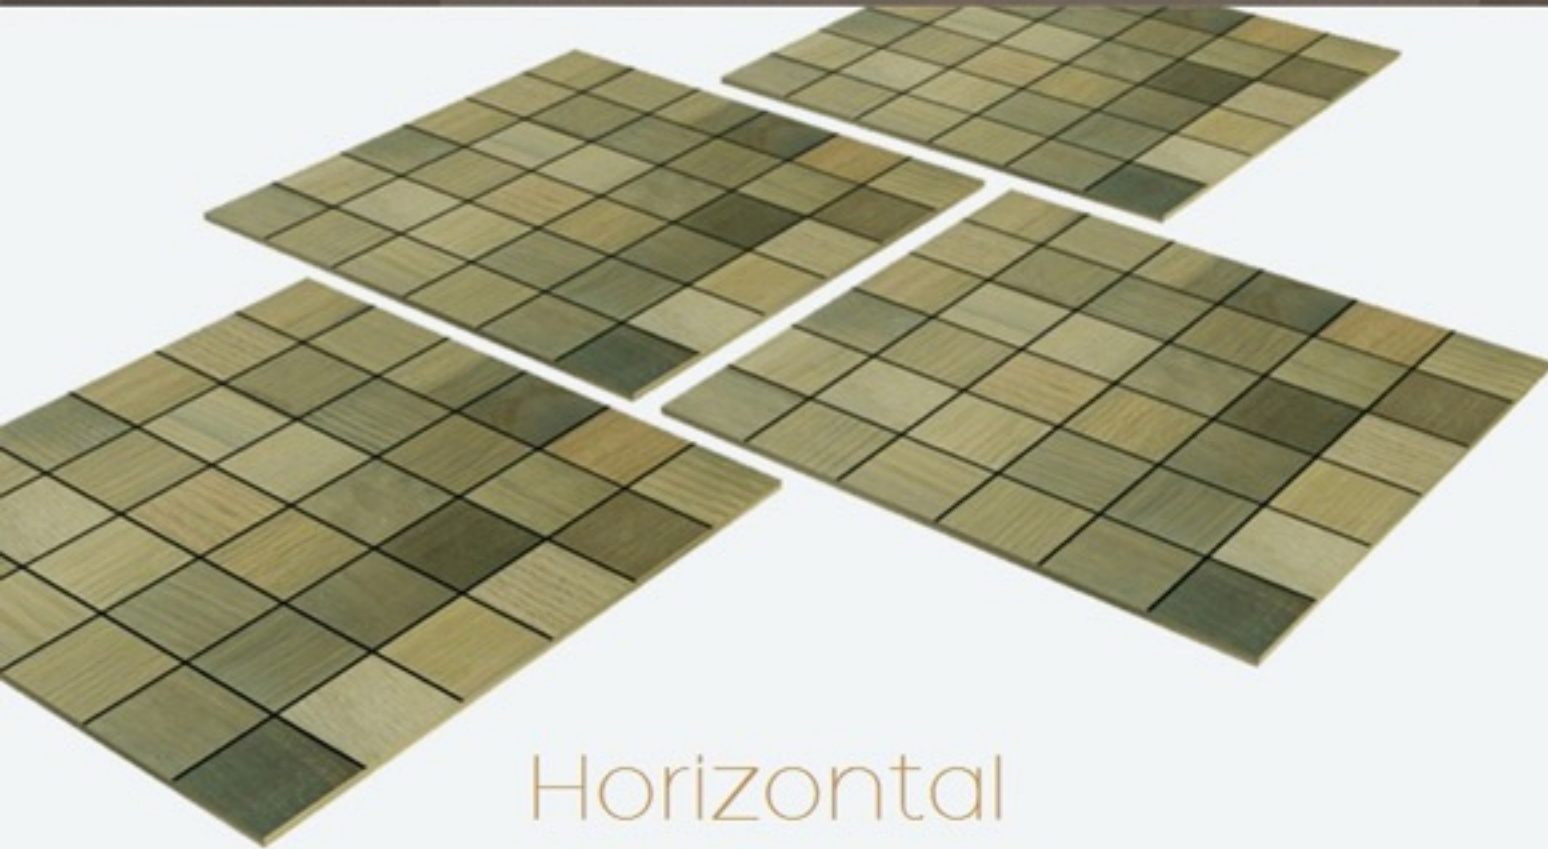

Ready peel-n-stick glue film to work on glass or acrylic or plywood.

Light Weight Mosaics

Wood Mosaics with feather lite weight
(180 gms to 450 gms)

Horizontal
& Vertical Grains

300 mm x 300 mm
Perfect Dimension

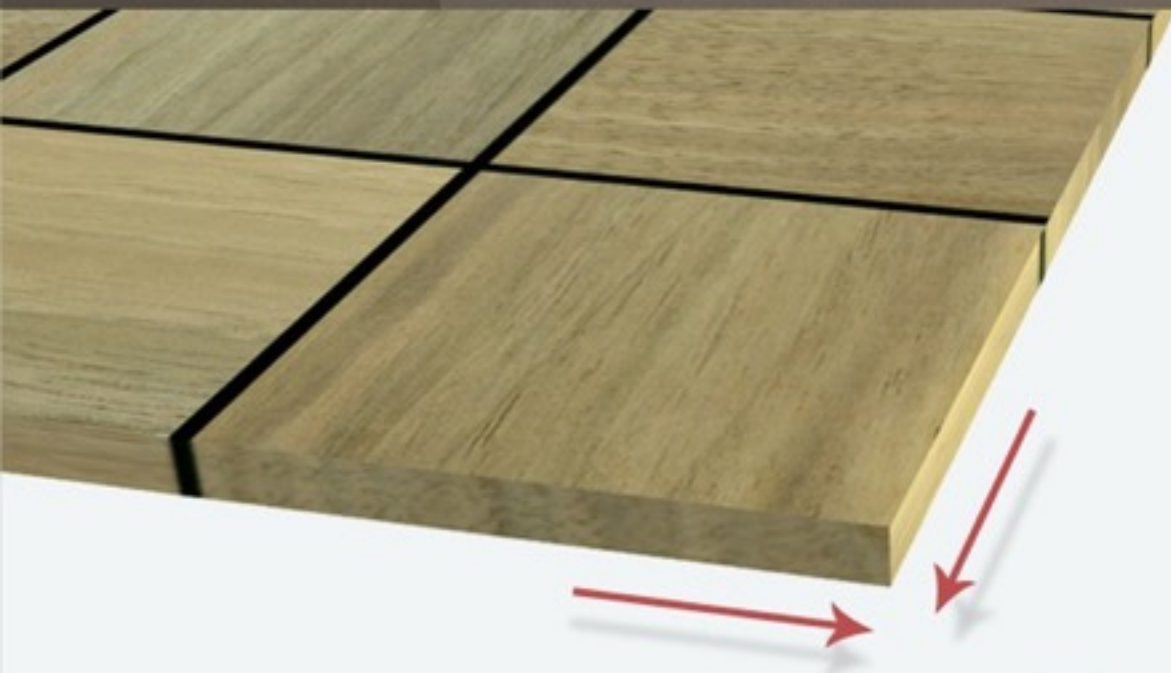

Flexible Fabric Backing

Tile Thickness
6 mm

Tile size
50 mm x 50 mm

Tiles per Sheet - 36

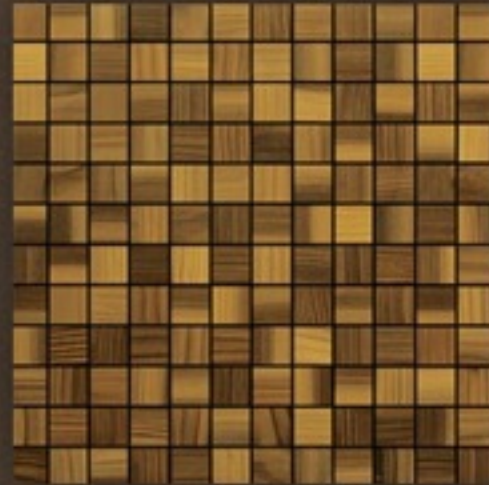

20 Sheets Per Box

Per Box Weight between 5.15 kg. to 7.75 kg.
