

DGMR is an independent Dutch consultancy agency (SME) with applied physics as its work field. DGMR delivers high quality services and products to improve the living and working environment. Health, safety and sustainability are the themes on which DGMR consults.

In 1980 engineers Van Dalfsen, Gies, Meerdink and Van Rangelrooij started an engineering and consultancy agency: named DGMR. They wanted to connect quality to creativity and search for the boundaries of possibilities. We think along with clients in order to surprise them with optimal and integrated solutions. Still, that passion is in DGMR's DNA. We think ahead. We are a front-runner with high standing, innovative solutions.

DGMR has three subsidiaries: DGMR Industrie, Verkeer en Milieu BV, focussed on technical and policy advice on environmental aspects regarding infrastructure and industry; DGMR Software BV that develops and sells technical software and DGMR Bouw BV focussed on specialist advice for the construction industry. DGMR has offices in the Netherlands in the cities Arnhem, The Hague and Drachten.

In the Netherlands DGMR Bouw BV is an authority on the areas of urban development, energy & sustainability, building physics and acoustics, fire safety, security, façade technique, vibration technique and the environmental effects of our outdoor environment.

As a consultant on construction DGMR is involved with public buildings such as retail, education, health care, hotels, museums, cinemas, theatres, stations and stadiums but also residential buildings, offices and of these two functions combined. This involves new housing development, but also renovations, rezoning and restorations. We are not the consultant that just answers the question, we come up with solutions that can be integrated in the constructional or technical design.

Our enthusiastic team consists of staff members with various technical backgrounds. About 180 experts who aim to be the best in their field. Their specialist knowledge does not only help clients; they share that knowledge in networks and at colleges and universities.

General information

The ownership is held by partners who all work in the organisation. DGMR's quality management system is ISO9001:2008 certified. DGMR is also in the possession of the ISO14001:2004 environmental certificate and has acquired the CO₂-awareness certificate, level 3.

DGMR is a member of NLingenieurs. Furthermore, DGMR is a member of the DGBC (Dutch Green Building Counsel) and employs BREEAM-NL as well as BREEAM-international experts and assessors. Apart from BREEAM, DGMR employs LEED Approved professionals and WELL Approved professionals, who are licensed for LEED- and WELL-certifications.

Reference projects DGMR

Besides the new Schiphol Terminal, DGMR is also part of the Aecom/CePeZed team responsible for the design of the new A-pier. In the A-pier project DGMR is responsible for sustainability, fire safety and building physics.

DGMR is mostly involved in the more complex project with high ambitions on sustainability, safety and health (comfort).
